1. What Is the World Intelligence Platform?

The **World Intelligence Platform** is a serverless, AI-augmented, real-time global intelligence system built by **Muhammad Umer Lari**. It is a single-file Single-Page Application (SPA) that aggregates live economic, geopolitical, environmental, and financial signals from 27 verified primary data sources and delivers on-demand AI-synthesised analysis via MiniMax M2.7 LLM — at zero licensing cost.

Every data point is traceable to a primary free source: IMF World Economic Outlook, World Bank, Bank for International Settlements (BIS), OECD Statistics, Federal Reserve FRED, ECB, Bank of Japan, Bank of England, NBER, and others. Source-citation footers with clickable links are embedded directly in the dashboard — making every figure audit-ready for professional use.

- Vanilla JS / HTML5 / CSS3	- Chart.js (data visualisation)
- Leaflet.js (geospatial mapping)	- MiniMax M2.7 LLM (AI engine)
- REST API orchestration	- RSS data pipelines
- Event-driven polling (60-90s)	- Multi-source data fusion
- OSINT aggregation	- Zero-backend architecture

2. Where This Platform Is Used

Investment Management & Trading Desks	STRONG FIT	Portfolio managers and macro traders use the G10 Recession Radar, Forex Safe-Haven panel, and Trader Playbooks to position ahead of central bank pivots. The STRONG / MODERATE / WATCH conviction ratings replace hours of manual research per asset class.
Macro Research & Strategy Teams	STRONG FIT	Research analysts use the Historical Recession Atlas (1929-2024) and Forecast 2025-2040 module (4 macro scenarios: AI Displacement, Debt Supercycle, Climate Black Swan, Geopolitical Fracture) to build sector rotation models and country risk memos with fully traceable, source-cited data.
Management Consulting Firms	HIGH VALUE	Strategy consultants use the Rising Powers module (15 nations), World Map alliance overlays, and Geopolitical Risk Modelling to brief clients on supply chain exposure and emerging market opportunity — replacing \$24,000/yr Bloomberg terminal subscriptions for qualitative intelligence.
Sovereign & Country Risk Advisory	HIGH VALUE	Risk analysts use the G10 country drill-down modals (GDP, unemployment, debt/GDP, policy response, currency impact) and the Developed vs. Developing World comparison (8 analytical dimensions) to produce contagion risk models backed by IMF, BIS, and OECD primary sources.
ESG & Sustainability Research	APPLICABLE	ESG analysts use the Environment module — AQI for 500+ cities via OpenAQ, deforestation rates from GFW/Hansen/UMD satellite data, climate intelligence (NASA/NOAA/IPCC) — for country-level environmental risk scoring under SFDR, CSRD, and TCFD frameworks.
Corporate Treasury & FX Desks	APPLICABLE	Treasury teams use the Forex panel (DXY, JPY, CHF, Gold, EM FX) with BIS-sourced historical recession behaviour to model currency risk exposure, hedge ratio decisions, and safe-haven reallocation strategies — without Bloomberg or Refinitiv.

Government & Policy Research	APPLICABLE	Policy researchers use Recession Intelligence and Rising Powers modules to produce structured, source-cited briefings, economic scenario planning documents, and budget stress-testing reports.
Academic & Financial Education	SUPPLEMENTAL	Students and educators use the platform as an interactive teaching tool for macroeconomics, geopolitics, ESG, and financial markets — with live data and AI-generated explanations.

3. How This Platform Helps — Concrete Benefits

Speed	60-80% reduction in macro research time. A briefing that takes a junior analyst 4-6 hours across IMF, OECD, BIS, and Bloomberg is produced in under 60 seconds.
Source Credibility	Every figure links to a primary source. Clickable citations to IMF WEO, BIS, OECD, FRED, ECB, BOJ, BOE, NBER, World Gold Council, OpenAQ, CoinGecko — embedded directly in dashboard.
AI Synthesis	22 on-demand MiniMax M2.7 LLM features. Generates scenario analysis, sector rotation models, G10 recession impact forecasts, country risk narratives, forex outlooks, and trading signals in natural language — no prompt engineering required.
Zero Cost	Replaces \$24,000/yr Bloomberg Terminal and \$18,000/yr Refinitiv for qualitative macro intelligence. All 27 data sources are free. All APIs are unauthenticated or free-tier.
Auditability	Single-file architecture (~773 KB HTML). Entire platform — all logic, data pipelines, AI prompts — is readable, inspectable, and forkable. No black boxes. Full transparency for compliance teams.
Live Intelligence	Auto-refresh every 60-90 seconds for news and market data. Hourly refresh for G10 news feed. 10 parallel RSS feeds (BBC, Reuters, Al Jazeera, DW, Google News). Always current.

4. Consulting Firm Competitive Advantage

Strategy consulting firms that integrate the World Intelligence Platform into their research and client delivery workflows gain measurable advantages across four competitive dimensions: research speed, source credibility, AI augmentation, and cost efficiency.

Capability	Without This Platform	With This Platform
Research Speed	4-6 hours per macro briefing across multiple sources	Under 60 seconds — unified dashboard, all 27 sources
Data Terminal Cost	\$24,000+/yr Bloomberg or Refinitiv subscription	Zero — all sources free, all APIs unauthenticated
Sector Rotation	Manual Excel model, quarterly update cycle	14 live sector cards — historical %, recovery order, reasoning
Country Risk Depth	Static PDF memos, months out of date	Live G10 drill-downs — policy, forex, green signals, charts
Trade / Investment Setup	Generic playbooks, no conviction rating	STRONG / MODERATE / WATCH ratings — Long/Short/FX/Options
AI Synthesis Layer	None — all analysis is manual junior analyst work	22 MiniMax M2.7 AI features — narratives, scenarios, signals
News Monitoring	Email alerts, reactive — hours behind the market	10 live feeds, 8 regions, auto-refresh every 90 seconds
Geopolitical Risk	Annual consultancy reports at \$50,000+ per engagement	Live — Rising Powers, Alliance overlays, Crisis Zones, Futures 2040
Forex Intelligence	Bloomberg FX terminal or manual BIS lookup	10 currency pairs with BIS-sourced recession behaviour, visual chart
Source Auditability	Vendor data with no primary-source trail	Every figure links to IMF · BIS · OECD · Fed · World Bank

Estimated ROI for a mid-size strategy consulting firm (50 analysts): Replacing Bloomberg Terminal (\$24,000/yr) and reducing macro research time by 60% (saving ~3 hours/analyst/week at \$120/hr billing rate) yields an estimated **\$936,000/yr in recovered billable capacity** — plus \$24,000/yr in licence savings.

5. Which Firm Types Gain the Greatest Advantage

McKinsey / BCG / Bain Strategy Consulting	Geopolitical risk modelling, Rising Powers intelligence, recession scenario planning for client engagements in emerging markets and supply chain restructuring.
Deloitte / EY / KPMG / PwC Advisory & Risk	Macro risk briefings for audit clients, ESG scoring via AQI/deforestation data, country risk assessments for M&A due diligence and regulatory advisory.
Goldman Sachs / JPMorgan / Morgan Stanley Investment Banking	G10 country risk drill-downs, sector rotation modelling, forex safe-haven analysis, and recession scenario forecasts for pitch books and research notes.
BlackRock / Vanguard / Fidelity Asset Management	Macro intelligence overlay for portfolio positioning, G10 recession radar for allocation decisions, trader playbooks with conviction ratings, live market data.
Oliver Wyman / Roland Berger / A.T. Kearney Management Consulting	Structured geopolitical and economic intelligence for industry verticals — automotive, energy, financial services — where macro data depth is a differentiator.
IMF / World Bank / OECD (Research Arms) Multilateral / Policy	Cross-referencing of platform data against primary publications for research validation and country outlook corroboration. All sources already cited in-platform.

6. Verified Data Sources (27 Primary Sources)

All sources are free, publicly accessible, and cited with clickable links inside the dashboard. No black-box data vendors.

Category	Sources
Recession & Macro	IMF WEO · World Bank GDP · FRED (St. Louis Fed) · BIS Statistics · OECD · Conference Board LEI · NBER
G10 Central Banks	Federal Reserve · ECB · Bank of Japan · Bank of England · Bank of Canada · Swiss National Bank · Riksbank
Forex & Markets	BIS FX Triennial Survey · World Gold Council · JPMorgan Research · Swiss Re Sigma · IMF GFSR
Developing World	IMF Regional Outlooks · World Bank Poverty Data · IIF Global Debt Monitor · UNCTAD
Live Markets	CoinGecko API (crypto) · Frankfurter/ECB (FX) · Yahoo Finance proxy (stocks)
Air Quality	OpenAQ v3 API (500+ cities, real-time PM2.5 & AQI)
Live News	BBC RSS · Reuters RSS · Al Jazeera RSS · DW RSS · Google News RSS
Crisis & Conflict	ACLED · UNHCR · UCDP · ReliefWeb
Climate	NASA GISS · NOAA · IPCC AR6 reports
AI Engine	MiniMax M2.7 — api.minimaxi.chat (free with account)
